**Council of European National
Top-Level Domain Registries**

2021 CENTR Members' Days
3 June 2021 – 9.00-12.50 CEST - Online meeting

Agenda

9.00   **1.**   **Speed-networking session**

This session will be divided into six match-meetings of 10-15 minutes each, during which registrars will move from virtual table to table to meet registries.

10.50   *Coffee break*

11.00   **2.**   **Supply chain security & marketing – more security & still being friends**

As you are probably aware, most attacks on domains today take place via registrars, often by manipulating technical controls or by simply bypassing them via some form of manual social engineering. The purpose of the workshop is primarily to inventory and discuss the risks we see today and depending on the result of this discussion reason about what measures Registry Services can take and what activities we can otherwise have to minimize the registrars' risks and better protect our common customers. What activities and measures could improve the trust between registries - registrars - registrants?

11.50   *Coffee break*

12.00   **3.**   **What business intelligence do registrars need from registries?**

Data is the new oil. ccTLD registries collect different types of data on the use of domain names in their country.

How can registry data be activated for registrars? What kinds of analyses are the most useful? What are the pitfalls and obstacles?

Come join us for a discussion on the data we have, the data we could collect, and the analyses we can, and cannot do.

12.50   **End of meeting**
